## SKILLS

---

- Product:** Product Strategy, PRD Writing, User Stories, Wireframing, Funnel & Retention Analysis, ICE Prioritization, A/B Testing, KPI Tracking, Product Analytics (AARRR)
- Technical:** SQL (JOINS, Window Functions, CTEs), Python (Pandas, Streamlit), TypeScript, Next.js, APIs, Full-Stack Prototyping, Data Analysis
- AI:** LLMs, Agentic Workflow, AI-Assisted Prototyping, RAG Fundamentals

## PROJECTS

---

### Product Requirement Document Generator AI Tool

[Live Demo](#)

- Shipped a **live AI tool** that converts a problem statement into a structured, 7-section PRD in under **20 seconds** built with **Next.js, TypeScript, and Tailwind**, deployed on Vercel.
- Reduced LLM output hallucination via a **strict JSON prompt schema + auto-retry validation layer** (up to 2 retries), catching missing sections, non-quantitative metrics, and malformed JSON before render.
- Benchmarked output quality using **LLM-as-judge** across 10 synthetic problem statements (SaaS, fintech, health, EdTech) achieved **4.83/5.0** average across all 7 PRD dimensions.
- Designed a **split-screen UX** with streaming generation, version history, live editing, and Quick Refine reducing prompt-rewrite friction for iterative PRD refinement.

### Ownly (by Rapido) Food Delivery App Product Teardown & PRD

[Project Link](#)

- Identified **6 conversion friction points** across a 7-touchpoint user journey (discovery → onboarding → order → post-delivery); prioritized using **ICE scoring**, surfacing SSO onboarding as highest-leverage fix (**ICE: 8.0/10**).
- Authored a **full PRD** for the SSO fix including user stories, acceptance criteria, and success metrics targeting registration completion rate and Time-to-First-Click.
- Designed **low-fidelity wireframes** for an “Explore First, Geofence Later” flow with manual address fallback resolving GPS permission dead-ends blocking new-user activation.
- Built an **A/B test plan** with defined hypothesis, control/treatment split, and sample size to validate the onboarding fix before full rollout.

### Olist E-Commerce SQL Analytics & Dashboard

[GitHub](#)

- Surfaced that **25% of customers drive 48% of revenue** while another 25% are at-risk via **RFM segmentation** using CTEs and NTILE window functions on **100K orders across 9 tables**; flagged **\$1.5M in recoverable value**.
- Quantified that **late deliveries drop review scores by 1.72 points** (4.29 → 2.57) using multi-table JOINS and CASE segmentation with furniture/home showing the highest late-delivery rates.
- Delivered **10 product-focused SQL queries** spanning funnel analysis, revenue trends, payment behavior, and delivery performance, packaged in an interactive **Streamlit dashboard** (4 filterable tabs, live KPI cards) deployed on Streamlit Cloud.

## EDUCATION

---

2021 – 2025 **Ahmedabad University**

B.S. (Hons.) Computer Science

Relevant Coursework: **Statistics, Machine Learning, Probability and Stochastic Processes, Human Computer Interaction**
