Education

2021 – 2025 **Ahmedabad University**

B.S. (Hons.) Computer Science (4 yrs)

Relevant Coursework: **Statistics, Machine Learning, Human Computer Interaction**

Projects

Automated Invoice Exception Handling Time for Accounts Payable teams

Live Demo

- Scoped the problem to **7 invoice exception types** (amount mismatch, missing PO, duplicate, etc.) and used deterministic detection since finance teams need audit trails, not probabilistic guesses.
- Designed a **human-in-the-loop** flow where the LLM drafts fix proposals with confidence scores but a person always approves; quality gates catch bad proposals before they reach the reviewer.
- Built a learning loop where approved fixes become rules and **auto-resolve** identical exceptions, removing human review on repeat cases.
- Shipped end-to-end MVP (detection to resolution in **3 clicks**) with a live **ROI dashboard** tracking cost-per-invoice, labor hours saved, and touchless rate.

Unblocked Signup Drop-off and UX Friction points for Ownly food delivery app

Project Link

- Mapped the full user journey across 7 touchpoints, found **6 conversion friction points**, and used ICE scoring to rank them. SSO onboarding came out on top at 8.0/10.
- Wrote a **full PRD** for the SSO fix with user stories, acceptance criteria, and success metrics tied to registration completion rate.
- Sketched wireframes for an “Explore First, Geofence Later” flow that lets users browse without GPS permissions, solving the dead-end that blocks new signups.
- Put together an **A/B test plan** with hypothesis, control/treatment split, and sample size to validate the fix before rolling it out.

Designed DPDP Act-Compliant Data Consent Architecture for WhatsApp

GitHub

- Built a **4-bucket purpose-based data use model** (essential, user-benefit, business-benefit, data rights) replacing the "one consent wall" approach — balancing regulatory compliance with UX across 5 screens.
- Defined North Star metric (% MAU with valid consent state), **6 supporting metrics**, guardrails, and a diagnostic hypothesis tree for drop recovery; made the explicit trade-off that clearer explanations may lower acceptance rates but improve consent quality.
- Shipped a production-quality **mobile-first clickable prototype** (vanilla HTML/CSS/JS) with 5 screens, animated transitions, bottom sheet consent flows, toggle-based controls, and URL-persisted state — deployed on Vercel.

Experience

Machine Learning Assistant — *National Institute of Electronics and Information technology* May – Jul 2025

- Designed and delivered a 12-week ML curriculum for 40 students; iterated on content weekly based on student feedback and project completion data, all **40** made a working project.

Skills

Product: User Research, PRD, User Stories, Wireframing, Prioritization, A/B Testing

Technical: SQL, Python

AI & ML: LLM Integration, AI Evaluation Metrics, RAG

Tools: Figma, Excel, Mixpanel
